Now click "setup.exe" file and follow the steps. After finishing, you will see a popup "Thank you for using software" Q: Set multiline textbox in runtime I have a textbox with multiline = true, it works great as expected. However, I need to set the text in the multiline property in runtime. I tried many solutions, the most simple is this: MyTextBox.Multiline = true; MyTextBox.Lines.Clear(); MyTextBox.Lines.Add(someText); However, the problem is that, after this, if I try to change someText, it no longer gets added to the lines, but it does not "take away" the previous text. As I'm not sure what the inner workings of multiline are, I'm not sure if I'm doing this right. How can I get the right behavior? A: Lines collection is a live collection. Every time you append new line, the previous line is removed. You can use StringBuilder to build string and append lines to it in runtime. MyTextBox.Multiline = true; var sb = new StringBuilder(); sb.AppendLine("someText"); sb.AppendLine("moreText"); MyTextBox.Text = sb.ToString(); FILED NOT FOR PUBLICATION DEC 15 2016
