What's New in the MUltraMaximizer?

MUltraMaximizer is a tool that is able to help you set up your vocals in ways you have never been able to before. The software is designed to give you a global (or multiband) limiter in the form of a plug-in that will allow you to control the loudness of your mix in a relatively easy and user-friendly way, and without any further changes in your presets, you will be able to remove the unwanted peaks and make your mix sound better. First of all, let's define the tool: if we want to know it all there is to know about this software, then we have to start with the name. Although it has lots of uses, MUltraMaximizer should be named multiband maximizer as it is designed to help you maximise anything in the vocal range. This might seem like a silly thing to say, but MULTimaximizer allows you to bring up your vocal audio without having to adjust your highs or lows. It is also worth mentioning that you don't have to throw out those presets after using MULTimaximizer because they will stay in the system, but if you can't use your flat for the entire time, you can remove it, if you don't want to. One of the features worth mentioning is the metering system, as it will help you keep an eye on the real loudness of your music, as well as give you a couple of meters to compare it to. This is just one of many things that MULTimaximizer has to offer, and many people have already mentioned some other features that they believe are worth mentioning. Take a look at the software's user's manual to get the full details on its features. MULTimaximizer Pros and Cons: Pros: Has a very intuitive and user-friendly GUI that allows you to control various aspects of the plugin. Work well with vocals. The meter works as it should. A considerable amount of free presets and A-B presets are offered for comparison purposes. The highlighted meters can help you control loudness and reveal any peaks and dips. Cons: The plugin does not offer linear dynamics. The plugin's manual is a little bit difficult to read. This is all about MULTimaximizer, it is by far one of the best multiband maximizers. You can find it on their official website
